Valbonne, France · Open to hybrid and remote opportunities

SKILLS

Front-end

React · TypeScript · JavaScript · Angular · HTML5 / CSS

AI & automation

Mistral AI · n8n · LLM evaluation · test datasets · Mistral Batch · Random Forest

Back-end & systems

Node.js · Python · REST APIs · WebSocket · Kafka · Redis · Docker

Product

User-centred design · Accessibility · User interviews · Documentation

EXPERIENCE & SELECTED PROJECTS

Full-Stack AI Developer — Nextsourcia

March – July 2026 · 5 months

Final-year internship · HR SaaS platform combining operations, business monitoring and AI assistance.

- Built real-time operational dashboards backed by WebSocket, Kafka and Redis.
- Structured the lifecycle of nearly 50 AI configurations: versioning, publishing, deployment, rollback and synchronization.
- Set up a pre-production evaluation workflow with n8n, test datasets, Mistral Batch, benchmarks and automated LLM judges.

**Technologies:** React, Node.js, Mistral AI, n8n, WebSocket, Kafka, Redis, Zod

Personal project — Juno

2026

Full-stack job-search tracking application, designed and used on real cases.

- Designed the product, data model and user journeys for a job-search tracking application.
- Developed it end-to-end with React, Next.js, TypeScript, server logic and a relational database.
- Added AI-assisted job import, CV tailoring and draft-preparation features, plus automated tests and a desktop/mobile UX audit.

**Technologies:** React, Next.js, TypeScript, Cloudflare D1 / SQLite, Drizzle ORM, Playwright

Engineering project — Polytech Nice Sophia / Université Côte d’Azur

Oct. 2025 – Feb. 2026 · 5 months

Team project for GECOS: building-management alert supervision and multichannel routing.

- Gathered requirements from technical teams to define alert routing compatible with operational tools.
- Built a Docker service extensible through plugins to centralize, summarize and persist InfluxDB alerts.
- Integrated resilient routing to Kanboard, Slack, Teams and SMS with error recovery.

AI Development Internship — DNIIT

May – Aug. 2025 · 4 months

Internship in Vietnam, independently delivering a wildfire-risk prediction system.

- Prepared data and trained Random Forest models to estimate wildfire risk.
- Built a React dashboard making risk levels readable and actionable.

Academic project — Tron game

Jan. – Apr. 2025 · 3 months

Team multiplayer Tron game deployed on AWS.

- Built the friends system and gamification mechanics.
- Implemented local and online game modes, including an AI-controlled opponent.
- Deployed the multiplayer application on AWS.

EDUCATION

- 2023 – 2026 · Engineering degree in Computer Science, Human-Computer Interaction specialization — Polytech Nice Sophia
- 2025 · TOEIC: 970/990 — Polytech Nice Sophia
- 2021 – 2023 · PSI preparatory class — Lycée Couffignal

LANGUAGES

- French: native
- English: fluent
- German: intermediate

ADDITIONAL INFORMATION

- Driving licence (B)
- Student representative for the Information Systems and HCI track (2024 – 2026)
